The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 3, 17 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Silkeberg (6,033,706) in view of Hui and Swern and further in view of Beroza and Hemalatha.

Silkeberg discloses refining edible oil to retain antioxidative potency. Sesame oil is one of the oils contemplated in the refining (abstract). Starting at column 4, the raw material is screen to select seeds for extraction. Next the seeds are extracted by solvent extraction with C1 to C4 alcohols, as suggested in claim 7. Although milling is not mentioned, it would have been obvious to mill the seeds to improve the extraction efficiency. After degumming and neutralization with alkali (NaOH at column 5, lines 40-48), the seeds are bleached by a dedicated bleaching process that acts to precursor antioxidants in the oil. At column 6, lines 13-31, bleaching is accomplished by including amorphous silica gel and citric acid and the oil is heated to 50-90C. Next the oil is deodorized to produce oil with a reduced level of sesaminol oil in it (column 7 Table).

The claims also appear to differ from Silkeberg in the recitation of the sesamin content of the sesame oil. Beroza and Hemalatha teach that the sesamin content of sesame oil varies a lot from one oil source to another. Three oil samples in Table 1 include 1% by weight sesamin in Beroza. Hemalatha shows even higher amounts of sesamin in sesame seed samples from Assam (Table 1). It is appreciated that a specific sesame oil with a certain taste, sesamin and sesaminol content is not mentioned but one of ordinary skill in the art would be able to select a sesame oil for refining, as shown by Beroza and Hemalatha, that meets the particular requirements to obtain the desired final refined sesame oil. Silkeberg may have used a different process than that set forth in the claims the claims are directed to a product and not to the way it was made. No unobvious or unexpected difference is seen between the sesame oil of Silkeberg in view of Beroza and Hemalatha.

Applicants' arguments are directed to the process for making the sesame oil and not to the sesame oil itself.

Claims 4, 6-16, 19 and 20 are allowed.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art further shows the state of the art relating to bleaching edible oils.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
